

CLUSTER PLANES (2003)

By Charles Esseltine

Cluster planes are just any STACKABLE plane, that are thrown as one.

Here is a simple plane that works great from light Kami. I call it the EZ Flyer.

1.) Fold and unfold horizontally, and vertically.

2.) Fold one edge into the middle.

3.) Fold again.

4. Now fold the layers over the centerline. If they wind up over the centerline, dont worry about it. Flip the model over.

5.) Fold the model in half. Now fold 4 more. (While you can make up to ten or more, they will be harder to hold together.)

6a.) Stack them inside each other with the ends showing. Number each plane so that you can put them back together easier.

6b.) The front should look like this.

7a.) Slide them together.

7b.) Like so. From this point on they will be folded as one.

8a.) Fold down the tips of the wings out.

8b.) Front view.

9a.) Fold down the wings on both sides. You may have to adjust the wing tips.

9b.) Front view.

Hold the front with your thumb, and middle finger.

Put your pointer finger here. Push off with it when you let go of the front at the end of your toss.
