

MOMMY HEART & BABY HEART

Start with a 6" (5 $\frac{5}{8}$ " square of dup-color paper. (Kami is okay - one heart will be white.) Decide which color you want to be the mommy heart and begin with that side up. Note: use a ruler to measure accurately in steps 2 and 12.

① Pre-crease the vertical diagonal.

② Measure along the diagonal and mark 3 $\frac{5}{8}$ " from the top tip T. Pre-crease. (Note: mark is at 43% from T)

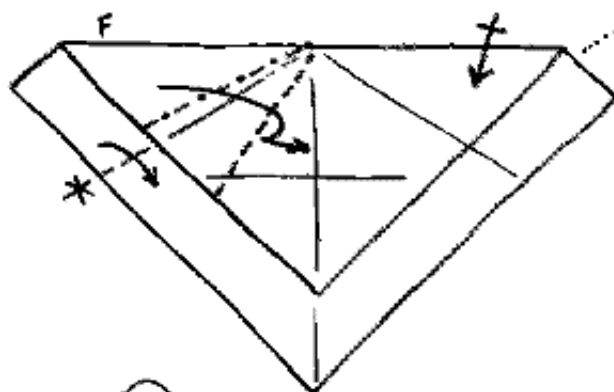

③ a) Pre-crease T to step 2's crease. b) Refold step 2.

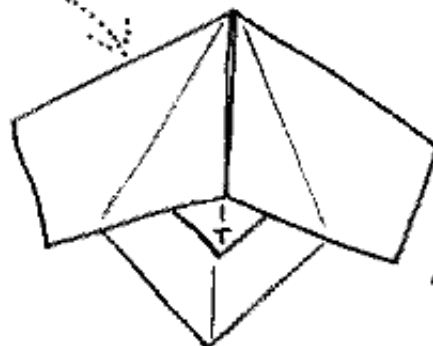

⑤ Unfold.

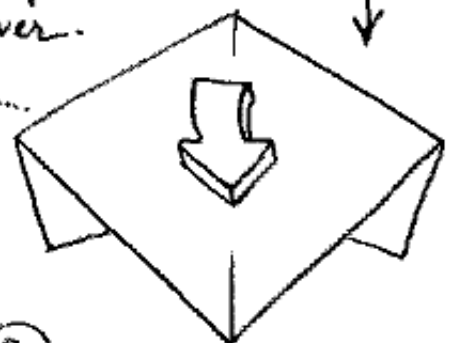

④ VF so corner C meets lower edge. Repeat on other side.

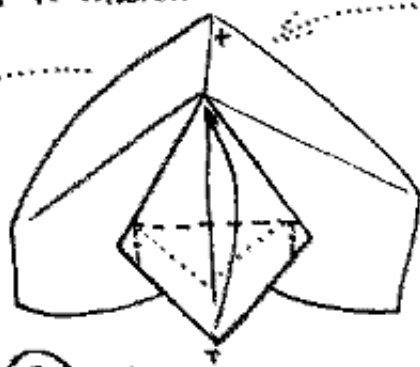

6 Squash-fold so the mt. lies along the vertical. Repeat on right to match. * is pre-crease.

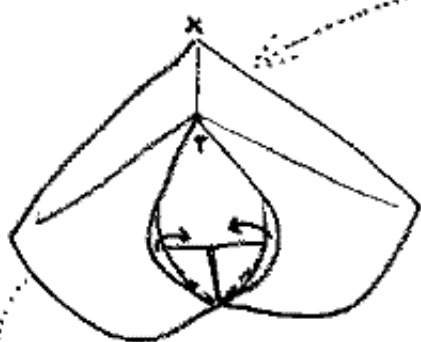

7 Flip model over.

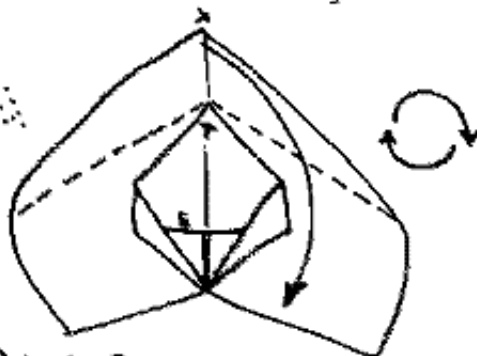

8 Lift near layer. Note corner X.

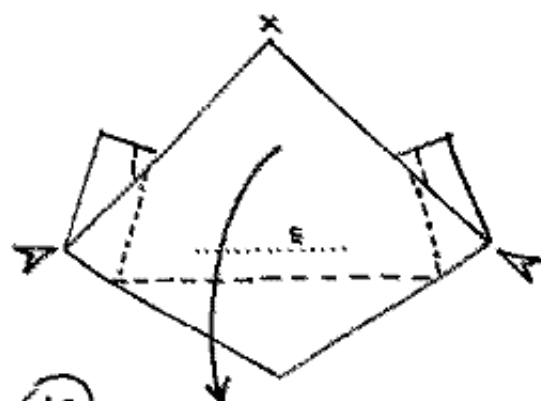

9 View inside. On step 3a's pre-crease, VF T to innermost corner.

10 The tension will pull the sides up. Flatten in a kind of petal fold (on step 9's dotted line.)

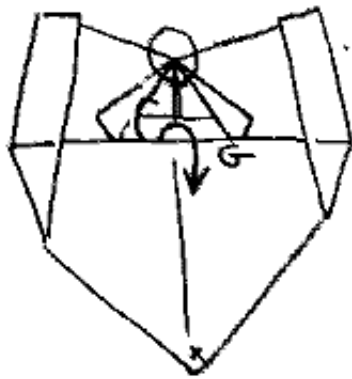

11 Note folded edge E. Bring corner X back down. Tilt model 180°.

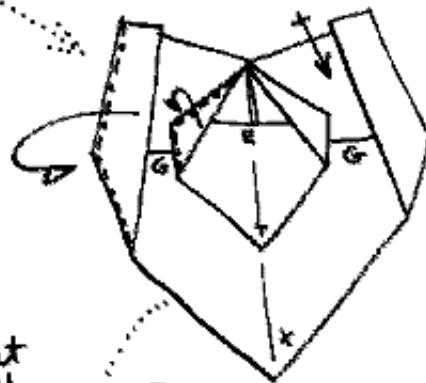

12 VF near flap down $\frac{5}{16}$ " below edge E; membrane-fold sides.

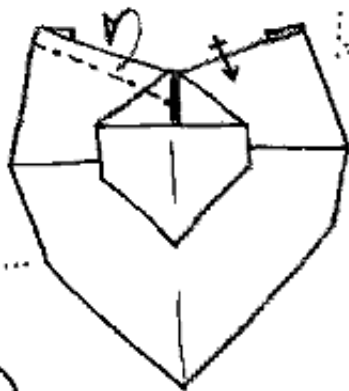

Mommy heart & baby heart p. 3

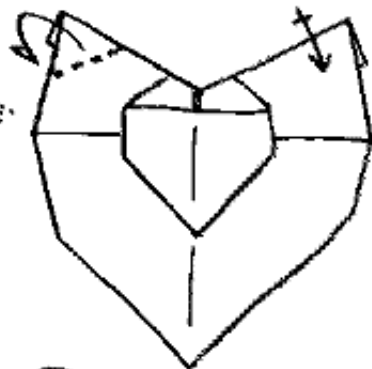

13 Holding down at circle, carefully pull out inner flap T, over edge G.

14 Carefully turn the near left layers inside out: large flap first then small one on that side. Partially unfold the model and invert the edges into mountains. Flatten. Repeat on the right. If the model has been folded accurately, the soon-to-be baby heart will lock around the edge G and lie flat without tearing.

15 M+F; Repeat on right to match

16 M+F; Repeat on right to match.
