

SPIKENARD

This origami battle robot has a wedge tail, lateral ramming spikes and a front pecking spike. He runs on BALL POWER, and he's aiming to become the champion in the Paperweight Division!

A 10" square of matte gold foil will accommodate a 2 1/2" diameter rubber ball.

1) WSU; book-pinch twice to find center of paper.

2) Cupboard-pinch four times.

3) Fold-unfold edge to far pinch. Repeat three times. Flip paper over.

5) F-UF, bisecting corner of little triangle. Repeat 7 times.

4) F-UF diagonals only as far as center square. Flip paper to white side.

Spikenard, p. 2

6

Enlarged view of one corner:
F-UF edges of paper to the
diagonal, as if a miniature
kite fold. Repeat with
other three corners.

7

One more pre-crease and
we're ready to collapse the
model into shape. F-UF
between the junctions of the
creases from steps 5 and 6.

8

Holding adjacent folded
edges snugly together,
re-fold steps 6 and 7.
Repeat all the way
around.

9

Gather up each corner on the
creases from steps 4 and 5,
and pinch closed.

Spikenard, p. 3

10

Flip model upside -
down.

11

Holding at circle, IRF one
spike so corner X lies along
middle of flap.

12

Detail: Narrow;
repeat on hind layer.

13

M+F remaining
corner inside.

14

Note spike sticks
up at an angle. Now
work on spike in
opposite corner.

15

IRF so flap is
more horizontal.
(X will lie at middle
of flap.)

Spikenard, p. 4

16 Narrow both layers.

17 Result. Next...

18 ... On third Spike, IRF.

21

20 Hold at circles + push together to "spread-crimp."

19 IRF.

22

Last corner:
a) Sink tip.
b) IRF.

SPIKENARD

To activate him, place a rubber ball inside + roll them around on a tray.

23 Crimp, then flatten + curve tail.

24
