

Home is where the heart is

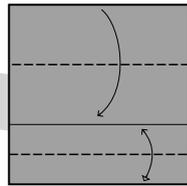

designed and diagrammed by Sara Adams in March 2020
www.happyfolding.com

 Start with the color side up for a colored roof and heart.

1. Fold into thirds using your preferred method.

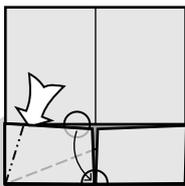

2. Fold down the top raw edge along an existing crease line. Fold the bottom raw edge to the 1/3 crease line.

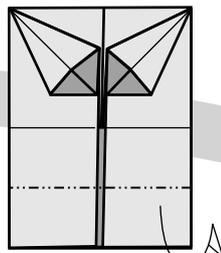

3. Crease the center.

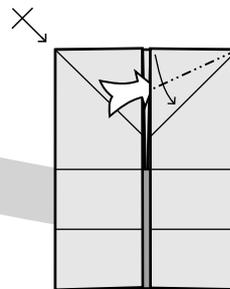

4. Fold in on both sides. Next step: enlarged view

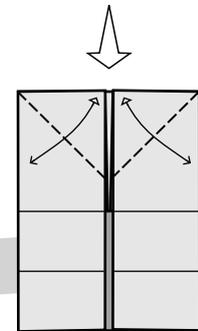

8. Squash-fold asymmetrically to align the raw edge (2nd layer) with the center of the bottom edge. Avoid creasing right of the center (dotted line in Step 9).

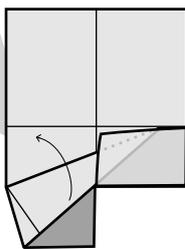

7. Mountain-fold along an existing crease line. Flip over the model.

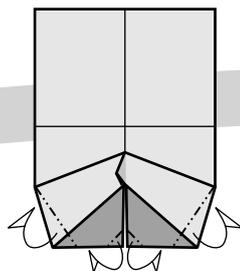

6. Squash-fold on both sides.

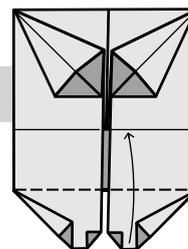

5. Precrease the top layer on both sides.

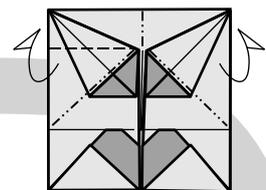

9. Unfold Step 8 and repeat it on the other side. Then refold both sides, forming a rabbit-ear with a small flap in the center.

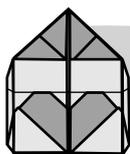

10. Fold behind the squash-folds on existing creases. Fold behind small corners to finish shaping the heart. Flip over the model.

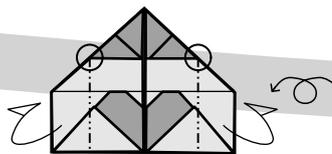

11. Fold up, creasing through all layers. Make a strong crease.

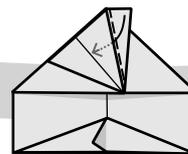

12. Precrease the diagonal folds, then fold behind both corners at the same time to form a rabbit-ear.

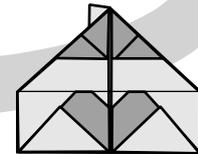

16. Congratulations, you have completed the model.

15. Fold behind both sides at the corners of the roof, then partially unfold for the house to stand.

14. Optionally tuck inside the flap to hide it and lock the layers together. Flip over the model.

13. The model should look like this. Flip it over.
